

XG-80KP01

Wired Smart Keypad

Overview

The XG-80KP02 Touch Keypad is a sleek and advanced interface designed for modern security systems. With a full-touch glass panel and graphic LCD display, this keypad combines aesthetics with functionality, ensuring easy and secure access control.

The XG-80KP02 features customizable backlighting for low-light visibility and a responsive touch interface that reduces reliance on physical buttons, minimizing wear. It includes the latest firmware updates for real-time notifications and system alerts, keeping users informed about their security system status.

Key Feature

Full Touch Glass Panel:	Provides a smooth, responsive touch interface for easy operation.
Graphic LCD Display:	99, with freely programmable parameters.
Tamper Switch:	Integrated tamper detection to prevent unauthorized access or tampering.
Password Error Transmission Limit:	Ensures enhanced security by limiting the number of incorrect password entries.
Periodic Self-Check:	The keypad periodically checks its working status to ensure optimal performance.
Programmable Alarm Host:	Customizable settings allow for integration with various alarm systems.
Two-Way Wired Communication:	Enables reliable, bidirectional communication with the alarm host, ensuring timely and accurate responses.

- Its sleek design is complemented by a robust build that ensures durability and longevity, even in demanding conditions.
- The intuitive user interface makes setup and daily operations straightforward, accommodating both tech-savvy individuals and those less familiar with modern technology.

Specification

Model number:	XG-80KP01 Wired Keypad
