

XG-8WPB01

Wireless Panic Button

Overview

The XG-8WPB01 Panic Button is a single-button emergency device designed to send immediate alerts in critical situations. Compact and highly sensitive, this panic button is easy to operate and can trigger wireless alarms within a 30-meter range.

It communicates with other wireless devices using the same frequency, making it ideal for personal safety and security system integrations. Its sleek design allows it to double as a decorative piece while providing crucial security functionality.

Key Feature

Portable and Compact Design:	Small enough to carry with you, making it easy to access in case of an emergency while also serving as a sleek, decorative item.
Wireless Compatibility:	Compatible with other wireless products operating on the same frequency, allowing easy integration into existing security systems.
Wide Networking Range:	Capable of wireless networking within a 100-meter range in open areas, providing extensive coverage for large spaces.
Durable and Reliable:	Built to withstand a wide range of environmental conditions, from -10°C to +50°C, and up to 95% humidity without condensation.
Low Power Alert:	Notifies users when the battery is running low, ensuring uninterrupted functionality.

Application

Emergency Response:

- Perfect for use in homes, offices, and personal spaces where quick emergency alerts are necessary.

Wireless Security Systems:

- Can be coded to control other wireless security devices, triggering alarms and sending notifications during emergencies.

Specification

Model Number:	XG-8WPB01
Working Voltage:	DC 3V (1 x CR2032 button cell)
Static Current:	≤10μA
Alarm Current:	≤30mA
Wireless Networking Distance:	≤100m (in open areas)
Anti-RF Interference:	80MHz – 1GHz, 10V/m
Operating Temperature:	-10°C to +50°C
Working Humidity:	Maximum 95% RH (non-condensing)
Dimensions:	57.5 x 34.5 x 13 mm
